

Wiring An Un-Switched Fautasi Or Drua To Be Controlled By A Switched Light (Master-Slave)

Notes

- 1). The White (Negative) wire is shown as black on this diagram because white won't show up otherwise.
- 2). Again for clarity, the wires connecting the two lights together are shown exiting the side, if the lights were to be mounted end-to-end, you might want to considered threading them thru the vent holes.
